

11 December AI AGENT

In trad:

AGENTIC RAG

What is an agent in AI.

It is something, which according to env takes a decision. Like human.

If someone ~~through~~ throws a ball, human uses two hands to catch.

I can tell agent, look into my calendar and if two consecutive days are without meeting then book holiday.

Agent is behaving ~~inductively~~ autonomously without intervention.

Directed, reactive or proactive.

It understands from ENV.

An Agent perceives its env through ~~senses~~ sensors & acts upon its through actuators.

Perceive (data from sensor)

Think

Act

Learn

AGENT TYPES .

Learning Agents .

Utility - based Agents .

Goal-Based Agents .

Model-Based Reflex Agents

Simple Reflex - Agents .

Simple Reflex Agent .

They only work for current perception and have no ~~if then else~~ memory .

How to build .

↳ Leningrapph, Lang Cherin, Lang Flow strand

Model Based Reflex Agent .

↳ Like self driving cars .

Goal based Agent .

↳ book holiday ticket when two days holidays .

↳ ^{38 mins} road .
Utility based Agent . (trading agent example)

Learning Agents - like ChatGPT, Claude...

They learn from data.

Performance Assessment (When you ask something and it doesn't have knowledge then it hallucinates, so we use

critic. it evaluates the performance ~~off~~ for example by validating the reference

Learning Element.

Use feedback to improve behavior

Problem Generator. It is going to take from user. Example. ~~if etc~~ How to evaluate code written by ChatGPT is right or wrong

LLM Based Agent.

Outputs - Text code Tool calls
Not multi-modal.

it can give image & videos as well.

The ReAct Pattern
Reasoning + Acting together.

Different Framework.

1. Lang chain
2. NBN (Build visually)
3. Stands Agent
4. Lang flow
