Second kind of Neural Network we can build is Functional Ap.

Model with ~~see~~ more than one ~~see~~ algorithm

Keras functional is the only one

~~with~~ which can provide 2 two predictions.

Some of real time use cases for two pass predictions.

- 1) In healthcare, disease category (classification) & Patient risk score (Regression)
- 2) In loan, can ~~pay~~ grant loan (classification) & how much (Regression)
- 2) In e-commerce, product category (classification) Price (Regression)
- 4) In manufacturing, defect type & severity.
