

23 - October.

Sequential Model using Keras.

Today Functional Api using Keras.

NN can be build in 3 ways using keras.

- 1) Sequential.
- 2) Functional
- 3) Model subclasses.

Is there any difference in outcome.

Sequential.

model = Sequential()

Functional.

Input = Input(shape=(4,))

Sequential

model = Sequential()

model.add(Dense(8, input_dim=4))

Functional.

inputs = Input(shape=(4,))

l1 = Dense(8, activation='relu')(inputs)

l2 = Dense(10, 'relu')(l1)

l3 = Dense(10, 'relu')(l2)

output = Dense(3, 'softmax')(l3)
