

MODEL SUBCLASSING

8 developers

POC

Create Architecture

Sample.py

$l_1 = \text{Dense}(8, -)$

$l_2 = \text{Dense}(10, -)(l_1)$

$l_3 = \text{Dense}(10, -)(l_2)$

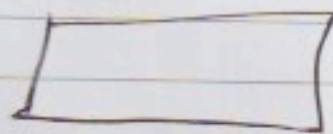

$\text{Output} = \text{Dense}(1, -)(l_3)$

import sample.py

input

compile

fit

Developers can only consume the architecture they cannot modify it (No Authority) but they can modify parameter

Example: in automobile systems Architecture can provide the algo and developers can use it. They can change things like ^{18" 20"}parameters wheel size but they need to have wheels as that's required by architecture.

MNIST Dataset

70/10/20

(Mini number data)
(Hand written digits)
