

27 October.

Keras framework

- 1) Sequential — ^{Step} stack of layer one by one.
- 2) Functional — ^{Step} one layer as input to another.
- 3) Model subclassing — creating architecture & forcing user to use that architecture.

TRANSFER LEARNING USING KERAS

Transfer learning means that we already have one pretrain model and we use that model for a specific purpose.

In Keras there are some pretrain models we can take it — pretrained model and give our dataset and do some predictions.

Tensorflow hub.

How to use ~~pre~~ Keras pre build models.

We need to take a pretrain model from community. — then use it for any classification.

gradio is a library which create a UI to test models.

It didn't work in lecture.
